CORE COMPETENCIES

Engineering-background Business Analyst with **6+ years** across Tier-1 engineering consultancy and end-to-end BA/PO delivery. Combines technical depth (electrical engineering, full-stack development) with business analysis rigor — able to author specs, validate technical feasibility, and build production systems independently when needed. Continuous learner dedicated to self-improvement; explore my ongoing project journey via the Portfolio link below.

Business Analysis	Requirements Gathering · TOR Analysis · As-Is/To-Be Process Modeling · User Stories & Acceptance Criteria · Sprint Planning · SRS/FSD Authoring · UAT · Post Go-live Support
Stakeholder Management	Conflict Resolution (Large State Enterprises) · End-user to Executive Communication · Scope Management · Cross-team Briefing · Multinational & Cross-functional Coordination
Tools	Figma · Draw.io · Jira · Notion · Claude · ChatGPT · Gemini · Replit
Technical	React · Vue.js · Node.js · TypeScript · Git/GitHub · ERD · Data Mapping · Basic SQL · PostgreSQL · REST API Design · Postman
Critical Thinking	Gap Analysis · Vendor Technical Clarification · Modular Architecture Design
Domain	Global Tier-1 Engineering Consultancy · Oil & Gas Offshore (PTTEP) · Government & State Enterprise (PEA, NT) · IEEE/IEC & ISO 9001/14001/27001 compliance

EXPERIENCE

Business Analyst

Provincial Electricity Authority (PEA) | Aug 2025 – Apr 2026

Forecasted 500M THB in procurement savings — Price Optimization by ML

- Cross-Functional Orchestration & Data Pipeline: Served as owner-side BA aligned across Procurement, IT, Operations, external tech vendors, and consulting partners. Scoped, cleaned, and structured raw enterprise data for ML price prediction models.
- Requirements Specification: Authored Functional Requirement Specifications (FRS) covering edge cases to ensure implementation accuracy by vendors.
- ROI Dashboard & Savings Attribution: Designed executive KPI dashboards and defined core logic to isolate true AI-driven savings from exogenous market factors (e.g., commodity price fluctuations) before financial attribution.
- On-Time Delivery: Delivered Phase 1 within a strict 90-day window of the 150-day regulatory timeline.

Product Builder (Sole BA & Full-Stack Developer) — Tech Partner Recruitment Platform

- End-to-End System Replacement: Production system replacing manual Google Forms workflows.
- Full-Lifecycle Ownership: Managed scope against non-technical stakeholder requests while handling UI/UX, ERD, RESTful API design, core business logic, and deployment.
- Tech Stack & Architecture: Built using Vue.js, Node.js/Express, and PostgreSQL, employing a modular architecture to decouple business logic from the presentation layer.
- Production Operations: Collaborated with the DevOps team to set up post-deployment system monitoring via Grafana.

Business Analyst

National Telecom (NT) | Aug 2024 – Jul 2025

Corporate Digital Transformation KPI — Outsource Maintenance & SLA Management Platform

- Digital Transformation: Digitized legacy paper workflows into an end-to-end web system—automating job approvals, wage calculations, and SLA penalty enforcement to directly support executive cost-control targets.
- Data Integration: Identified key data owners and integrated third-party network monitoring APIs to cross-check technician logs against real-time downtime data, eliminating discrepancies and preventing overbilling.
- Dynamic SLA & Penalty Engine: Translated complex TOR requirements into automated business logic and database schemas, computing multi-tiered SLA penalties based on client tier (e.g., enterprise vs. retail).
- Requirements Reconciliation: Bridges contract policy with field realities by designing SLA pause/exception logic (e.g., power outages, restricted site access) through hands-on user research.

- End-to-End System Design: Authored complete Functional System Documentation (FSD), data mappings, ERDs, use cases, and clickable Figma prototypes prior to development.
- Delivery & Operations: Managed Waterfall task backlogs in GitHub Projects, conducted UAT, produced user manuals, and delivered nationwide end-user training to drive system adoption.

Consultant Engineer

Technip Energies (*Tier-1 Global Consultancy, Paris HQ*) | Apr 2021 – Dec 2023

Quality Gate for Multi-Million-Dollar Deliverables — Offshore Oil & Gas Projects

- Offshore Field Surveys & Findings: Conducted high-risk, time-critical field surveys on PTTEP offshore platforms in the Gulf of Thailand, assessing physical installation constraints to gather critical project data.
- Feasibility-Driven Technical Solutions: Formulated technical solutions based on feasibility optimization, ensuring strict adherence to international standards (ISO) and client specifications (e.g., PTTEP, Chevron).
- Risk & Failure-Mode Analysis: Authored multi-scenario contingency analyses (e.g., fire response, emergency evacuation, load-shedding), applying rigorous failure-mode discipline to identify and mitigate integration risks.
- Vendor Evaluation & Technical Alignment: Reviewed technical submissions (TBE, TC, VDR) and delivered practical, market-ready solutions that prevented over-engineering and lead-time delays.

Consult Engineer

Nortis Energies | Aug 2019 – Oct 2020

Industrial Energy Cost Optimization — Solar Solutions 2 MW

- On-Site Assessment & Feasibility Analysis: Conducted technical site surveys for industrial clients—assessing physical constraints (shading, space, cabling distance) and modeling financial payback periods (ROI) to justify infrastructure investment.
- Optimal System Design: Designed end-to-end rooftop solar systems for factories and industrial estates, covering load profile analysis through execution design to optimize energy savings.
- Supply Chain & Risk Management: Monitored procurement timelines and mitigated supply chain delays by reallocating equipment from lower-priority projects to keep installations on schedule.
- Implementation & Downtime Minimization: Supervised system integration with clients' existing power grids, following strict quality checklists and rapidly resolving technical faults to minimize factory downtime.

Freelance

Self-Employed | Periodically since 2018

Independent Client Engagements — Broad Domain Exposure & End-to-End Ownership

- End-to-End BA Consulting: Delivered freelance Business Analysis services for external clients—handling requirement gathering, stakeholder management, and full documentation (FRS/FSD, user flows, and wireframes).
- Electrical CAD & Technical Design: Produced electrical single-line diagrams (SLD) and technical blueprints tailored to client specifications and safety standards.
- Tutoring & Knowledge Delivery: Conducted private mathematics tutoring, translating complex technical concepts into structured, easily digestible learning plans.

EDUCATION

B.Eng. Electrical Engineering King Mongkut's University of Technology Thonburi (KMUTT) | 2016–2019

Second-Class Honours | GPA 3.46 | Teaching Assistant Scholarship

CERTIFICATIONS & LICENSES

Professional Engineer License	Council of Engineers
UX Design Certificate	UpskillUX · 2024
The Complete Python Bootcamp	Udemy 2019

LANGUAGES

Thai	Native
English	Professional — TOEIC 870
