PROFESSIONAL SUMMARY

6+ years of professional experience across engineering consultancy and business analysis.

Engineer. BA. Developer. Three roles most people pick one from. The overlap is where the value is: requirements that are technically sound, systems that reflect actual business logic, and delivery that doesn't get lost in translation between teams.

In practice: authored FRS that forecasted 500M THB in procurement savings, built a production recruitment platform (React, Vue.js, Node.js, PostgreSQL), and contributed to a digitization system, tracked as CEO-level KPI under NT's Digital Transformation. Engineering background from Technip Energies, a global Tier-1 engineering consultancy — operating within strict international delivery standards, English-language documentation, and multinational stakeholder environments. Possesses a strong gap-analyst mindset developed as a department QA focal point.

EXPERIENCE

Business Analyst

Provincial Electricity Authority (PEA) | Aug 2025 – Apr 2026

500M THB in procurement savings — Price Optimization by ML

- Acted as owner-side BA: owned and prioritized product backlog; authored FRS, user stories, and acceptance criteria; coordinated across procurement, legal, IT, and operations to align delivery with external tech partner
- Authored full FSD covering application flow, business logic, screen interfaces, master data design, and fit & gap analysis
- Wrote FRS covering edge cases for e-signature API integration — defined rollback behavior on signing failure to ensure vendor implementation correctness
- Drafted ROI dashboard design to reflect executive KPIs; handed off to vendor for build
- Delivered Phase 1 within 90/150-day regulatory timeline

Product builder (Sole BA and full-stack developer) — Recruitment Platform

- Built production system from zero: requirement scoping, ERD, REST API design, business logic, UI/UX, deployment
- Stack: Vue.js · Node.js/Express · PostgreSQL · Modular architecture separating business logic from UI layer
- Managed scope against non-technical stakeholder requests; advised build-vs-vendor tradeoffs to senior decision-makers
- Replaced manual Google Forms process; shipped within engagement period

Business Analyst

National Telecom (NT) | Aug 2024 – Jul 2025

Claimed KPI at C-level — Digital Transformation

- Digitized paper-based report into a full system covering task approval, wage calculation, and penalty workflows
- Designed complete FSD: application flow, business logic, master data tables, and data mapping from third-party network monitoring API
- Created use case diagrams (Draw.io, FigJam) capturing multi-role actor interactions
- Produced Figma lo-fi wireframes and clickable prototypes for stakeholder sign-off before development began
- Coordinated with developer across iterative delivery — reviewed deliverables against spec, resolved ambiguities before rework, in close collaboration with manager
- Conducted UAT; tracked and managed defects in GitHub; confirmed resolution before go-live
- Provided post go-live production support and root-cause analysis
- Wrote user manual and conducted end-user training

Consult Engineer — Tier-1 Engineering Consultancy (Offshore Projects)

Technip Energies (Global Consultancy, Paris HQ) | Apr 2021 – Dec 2023

- Conducted on-site surveys on PTTEP offshore platforms — assessed installation constraints, proposed technical solutions, and translated findings into TBE/TC procurement documents
- Reviewed bidder and vendor technical documents (TBE, TC, VDR) as quality gate for multi-million-dollar deliverables
- Resolved technical conflicts between international vendors and PTTEP client engineers when deliverables deviated from spec — identified practical, market-available solutions without over-engineering or impacting lead times
- Designed multi-scenario contingency analyses (fire, evacuation, load-shedding) — failure-mode discipline applied to integration risk assessment in BA work
- QA focal point for internal audits and ISO 9001 / 14001 / 27001 third-party readiness

Consult Engineer

Nortis Energies | Aug 2019 – Oct 2020

- Designed solar power systems for factory and industrial-estate clients: load analysis through implementation
- Conducted on-site surveys; diagnosed and resolved technical faults to minimize production downtime

Freelance

Periodically since 2018

- Confidently managing clients and executing freelance projects independently on time.

EDUCATION

B.Eng. Electrical Engineering

King Mongkut's University of Technology Thonburi (KMUTT) | 2016–2019

Second-Class Honours | GPA 3.46 | Teaching Assistant Scholarship

CERTIFICATIONS & LICENSES

Professional Engineer License	Council of Engineers, Thailand
UX Design Certificate	UpskillUX · 2024

SKILLS

Business Analysis & Product	Product Backlog Ownership, Backlog Prioritization, Sprint Planning, User Stories & Acceptance Criteria, As-Is/To-Be Process Modeling, SRS/FSD Authoring, Fit & Gap Analysis, Use Case Diagrams, UAT, Post Go-live Support, TOR Analysis, Cross-team Briefing, Scope Management
Technical	React, Vue.js, Node.js, TypeScript, PostgreSQL, REST API Design, ERD, Data Mapping, Postman, Git, GitHub, GitProject (Similar to Jira), Figma (Clickable Prototypes), FigJam, Draw.io, Modular Architecture Design
Domain	Agile & Iterative Delivery, Digital Product Delivery, Oil & Gas Offshore (PTTEP Clients), Government & State Enterprise, SDLC (Iterative & Waterfall), Failure-Mode & Integration Risk Analysis, Vendor Technical Clarification, ISO 9001/14001/27001, Training Material Authoring
AI Tools	Claude, ChatGPT, Gemini, Replit

LANGUAGES

Thai	Native
English	Professional — TOEIC 770 Global company experience
